

## 1.0 Introduction

Plugin to create accordion in an article.

Placing accordions within accordions on the same page is not supported.

## 2.0 Plugin Parameters

The screenshot shows a plugin configuration interface with the following elements:

- Header:** "Plugins: Content - Create accordion in article by BrainforgeUK." with a gear icon.
- Buttons:** "Save" (green button), "Save & Close" (grey button with checkmark), and "Close" (grey button with red cross).
- Tab Navigation:** "Plugin" (selected), "CSS", and "JS".
- Title:** "Content - Create accordion in article by BrainforgeUK."
- Path:** "content / bfaccordion"
- Instructions:** A blue button labeled "Instructions...".
- Close Other Panels:** A checkbox.
- Buttons at the bottom:** "No" (red button) and "Yes" (white button).

### Close Other Panels

If enabled this parameter only permits one panel to be open at a time.

The current panel will close when you open another.

This can be overridden by each accordion.

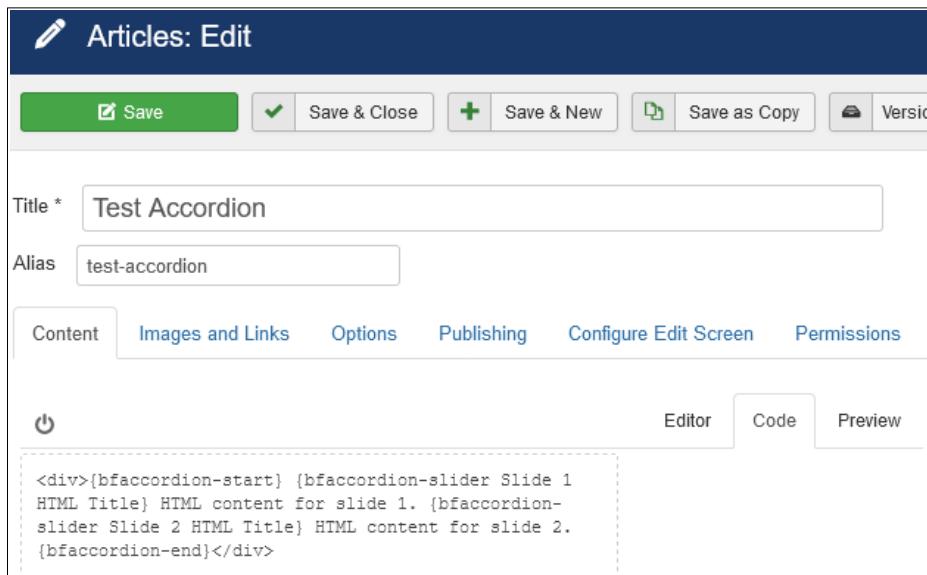

## 3.0 Features

### 3.1 Basic Functionality

#### Syntax in editor

```
• <div> {bfaccordion-start}
  {bfaccordion-slider Slide 1 HTML Title}
  HTML content for slide 1.
  {bfaccordion-slider Slide 2 HTML Title}
  HTML content for slide 2.
  {bfaccordion-end}
</div>
```

Notice how the **bfaccordion** controls must be wrapped in a `<div>` HTML element.  
Make sure your article text editor does not wrap it with `<p>` elements!

Screenshot of front-end.

### 3.2 Active Slider Control

By default, on entering the page, no sliders are active.

## **Content Plugin - Create accordion in article by Brainforge.UK**

There are three ways of activating a particular slider when article opened.

1. Place ID number of the slider as a parameter in the `{bfaccordion-start}` escape.  
To open the first slider:      `{bfaccordion-start 0}`  
To open the second slider:    `{bfaccordion-start 1}`
2. Using a URL parameter in links to the article page.  
<http://mydomain.com/articles/posts/396-test-accordion?sliderid=bfaccordion-396-slider-0>

`bfaccordion-396-slider-0` = as shown when hovering over slider header link  
(from # onwards, excluding the # prefix)

3. Creating menu links to each of the slider links.

For example:

1. Create menu item for your article with alias 'myarticle'.
  2. Create submenu item for slider 0 with alias 'bfaccordion-396-slider-0'.
  3. Create submenu item for slider 1 with alias 'bfaccordion-396-slider-1'.
- ... etc ...

NOTE: the # prefix must be omitted - not allowed in menu alias.

### **3.3 Overriding 'Close Other Panels' Parameter**

Add `hide-others` parameter in the `{bfaccordion-start}` escape.

`{bfaccordion-start hide-others}`

### **3.4 Combining Options**

You include a comma separated list of options in the `{bfaccordion-start}` escape.

For example:

`{bfaccordion-start 1,hide-others}`

## 4.0 Advance Features

### 4.1 Including Expand and Compress Icons in Header

The screenshot shows a Joomla article page with a dark blue header containing the title 'CASSIOPEIA'. Below the header, a breadcrumb navigation bar indicates 'You are here: Home'. The main content area has a heading 'Test Accordion'. Underneath it, there is a 'Details' section with the following information:

- Written by: admin
- Category: [Uncategorised](#)
- Published: 30 January 2022
- Hits: 14

Below the details, there are two expandable sections, each with a title and an 'X' icon to close the section.

- Location 1 : Room 1 (Room Type 1.1) X
- Location 2 : Room 2 (Room Type 1.2) X

At the bottom of the content area, the text 'HTML content for slide 2.' is visible.

The expand and expand icons shown are achieved by using the escape sequence `{bfaccordionlabelicons}` in the HTML of the title.

#### Syntax in editor

- ```
<div> {bfaccordion-start}
{bfaccordion-slider}
<h3 class="btn btn-primary" style="width:100%;">
    Location 1 : Room 1 (Room Type 1.1)
    &nbsp;      {bfaccordionlabelicons}

</h3>
}
HTML content for slide 1.
{bfaccordion-slider}
<h3 class="btn btn-primary" style="width:100%;">
    Location 2 : Room 2 (Room Type 1.2)
    &nbsp;      {bfaccordionlabelicons}

</h3>
}
HTML content for slide 2.
{bfaccordion-end}
</div>
```

The expand / compress icons are configured using Joomla language text, so you can use language overrides to customise these as required. The default settings are the following:

```
PLG_CONTENT_BFACCORDION_COMPRESS_ICON=<span class='fa fa-compress-arrows-alt'> </span>" 
PLG_CONTENT_BFACCORDION_EXPAND_ICON=<span class="fa fa-expand-arrows-alt"> </span>"
```

Alternatively Joomla Standard Icomoon Fonts can be used, as described here:

[https://docs.joomla.org/J3.x:Joomla\\_Standard\\_Icomoon\\_Fonts](https://docs.joomla.org/J3.x:Joomla_Standard_Icomoon_Fonts)
